Mind Sprint

Duolingo for Logic, made for Bharat · built on Sarvam AI

Sarvam Campus Hackathon · Oct 2026
Live sarvam-campus-26.vercel.app
Code github.com/omkaranu04/sarvam-campus-26

A **7-minute daily brain sprint** for Indian kids aged 8–14. Parents get one link on WhatsApp. The child solves four auto-graded puzzles **in their own language**, hears them read aloud, and gets hints that teach thinking instead of handing over answers. No app to install, no streak to lose, and no inflated "IQ +30%" claims.

PROBLEM Kids practise recall, not reasoning

- Indian schooling rewards rote memory and exam ranks. Logic, lateral thinking and curiosity get little daily practice.
- The closest logic app, LogIQids, is a **~144 MB install** with a streak mechanic that knocks a child's rank down after one missed day.
- Content is **English-first**. A child who reads Hindi or Tamil faster is shut out of puzzles they could solve.
- After BYJU'S, WhiteHat Jr ads and Lumosity's FTC settlement, parents distrust efficacy claims and sales-call pricing.

BUYER & USER Two people to win

- **The child** wants something that feels like a game, not homework. If it feels like school, they quit.
- **The parent** pays, and wants proof of effort without hype. They hold the WhatsApp account, so consent and delivery go through them.
- Pilot target from our plan: **150–200 consented families** (range 80–350) in the Dec 2026 winter break. We sized it conservatively on purpose.

PRODUCT Three surfaces, one daily habit

FOR THE CHILD · DAILY

Today's Sprint

Four puzzles: **Fast Math** (timed numeric), **Logic & Matrix**, **Riddle**, and **Curiosity** (a short science story, then a question). Every one is auto-graded. There's a 🔊 read-aloud button and up to three Socratic hints. Points drop gently with hints, and a correct answer always scores.

FOR THE PARENT · WEEKLY

Session Digest

A WhatsApp-style summary in the parent's language, plus a **voice note**. It reports facts only: sprints, days, puzzles, points, badges and one highlight. It ends with a question to ask at dinner. It never makes "% improvement" claims, compares children, or upsells.

FOR THE CHILD · WEEKLY, UNGRADED

Deep Thought

An open question such as "Is it ever okay to break a rule?". The child **speaks** an answer in any Indian language, and a thinking-buddy names one idea they had and asks a gentle follow-up. There's no score, and the server never stores the audio.

REAL OUTPUT · SOCRATIC HINT, HINDI, AFTER A WRONG ANSWER TO "2, 6, 12, 20, 30, ?"

> 💡 आस-पास की संख्याओं के प्रत्येक जोड़े के बीच का अंतर देखो। उन अंतरों के बारे में तुम्हें क्या लगता है?
>
> `sarvam-105b → sarvam-translate:v1 · answer (42) never shown`

> வணக்கம்! ஆரவ் இந்த வாரம் 1 ஸ்பிரிண்ட் முடித்தார், 4 புதிர்களைத் தீர்த்து 36 புள்ளிகள் பெற்றார்!
>
> `Parent digest, Tamil · plus a Bulbul v3 voice note`

11 LANGUAGES, ONE SWITCH

`en-IN` `hi-IN` `bn-IN` `ta-IN` `te-IN` `kn-IN` `ml-IN` `mr-IN` `gu-IN` `pa-IN` `od-IN`

Translation, read-aloud and speech input all use Sarvam's Indic models. A child in Chennai and a parent in Patna use the same product, each in their own language.

EDGE Why families pick it over the incumbent

DIMENSION	MIND SPRINT	TYPICAL LOGIC APP TODAY
Access	**A link in WhatsApp. Opens on a shared family phone.**	~144 MB app install, account setup
Motivation	**Completion badges that are never taken away**	Streaks and rank drops after a missed day
Language	**11 languages, read-aloud, spoken answers**	English-first text
Help	**Socratic hints, guarded server-side against leaks**	Show-answer or nothing
Parent trust	**Facts-only digest, flat public price, no sales calls**	Credit packs, efficacy-flavoured marketing

SARVAM STACK

Four Sarvam models, one per sense

SARVAM CAPABILITY	WHAT IT DOES IN MIND SPRINT	HOW WE CONFIGURED IT
Chat Completion (LLM) `sarvam-105b`	**5 jobs:** writes themed sprints · **re-solves every AI puzzle blind** to verify the answer · Socratic hints · parent digest · Deep Thought follow-ups	`reasoning_effort "low" for generate and verify; null for fast replies`
Translation `sarvam-translate:v1`	Puzzles, options, explanations, hints, digests and Deep Thought prompts, in 10 Indian languages plus English	`batched per puzzle, one retry, all-or-nothing options`
Text to Speech `bulbul:v3`	🔊 Reads puzzles and options aloud for younger or slower readers, and turns the parent digest into a WhatsApp-style voice note	`speaker "priya", allow-listed speakers, emoji stripped first`
Speech to Text `saarika:v2.5`	🎙️ Transcribes the child's spoken Deep Thought reflection, so they can think out loud in their own language	`language_code "unknown" (auto-detect)`

AI PIPELINES

Models chained, guarded at every hop

New sprint
theme ("cricket") → sarvam-105b writes 4 items as JSON → format check: one correct option, numeric answer → sarvam-105b re-solves each blind → disagreement → swap in a hand-checked item

Puzzle in Tamil
English item → sarvam-translate (batch) → options all translated, or all English → bulbul:v3 read-aloud

Hint
puzzle + secret answer → sarvam-105b Socratic nudge → leak guard: digits, number-words, intermediate results → translate

Parent digest
real stats only → sarvam-105b writes warm summary → any number not in stats → factual template → translate → bulbul:v3 voice note

Deep Thought
child speaks → saarika:v2.5 STT → sarvam-105b follow-up question → never grades; ignores prompt-injection → translate

BUILD

How it's engineered

- **Node.js with no npm dependencies**, plus a single-page app. Runs with `node server.js` and deploys to **Vercel** serverless (`api/[name].js`).
- The **API key stays server-side.** The browser only calls our six endpoints.
- **Cost guards:** 120 calls per minute per IP, request-size caps, and generic error messages.
- **Instant demo:** verified sprints are pre-generated at startup, and a hand-checked 5-day bank keeps the app working if the API is down.
- **DPDP Act §9(3) by design:** no profiling of minors, no behavioural ads, parent-held consent, audio never stored.

HARDENING

Built, attacked, fixed

We ran an **adversarial two-agent loop**. A Criticiser agent attacked the live app, using sarvam-105b as an independent judge and Sarvam back-translation to check meaning. An Improver agent shipped fixes, and the Criticiser re-tested each one.

16 issues found and logged

2/4 AI items swapped out by the blind re-solve in one test

0 page errors in end-to-end runs

3 full browser runs: Hindi, Tamil, live site

GO-TO-MARKET

From winter pilot to summer app

DEC 2026

Winter Mind Sprint

A free pilot over the 7–14 day school break. Daily link to the parent's 1:1 WhatsApp thread, explicit opt-in and STOP-to-pause. All-in cost is roughly ₹5–15k.

JAN 2027

New Year 31-Day Challenge

Starts on a calendar date, not a school date. The first paid sprint at a **flat, public ₹ price**, with no sales calls or EMI. It tests whether engagement survives once school resumes.

SUMMER 2027

Full app

Built only if the pilot data clears our go/no-go gates. Adds async weekly leagues, sibling profiles and school packs, and the pilot community becomes the warm launch audience.

ASK

What we need

Sarvam API credits for the winter pilot, intros to parent communities and teachers in Tier-1 metros, and counsel on the DPDP consent flow before launch.

OPEN

What we haven't solved yet

The blind re-solve can't catch a false science fact inside a passage, so curiosity stories need a fact-check pass. The hint leak check is English-only. On Vercel, a fresh sprint takes 45–90 seconds to generate.
